short report												Σ								

On my arrival, the touch screen of the Sincon_Star was not calibrated and the communication to the RSH sensor was disturbed.

I calibrated the touch and saved the new calibration permanent to the windows system, further I informed the customer, when this ever happen again, he can also simply use a USB mouse for operation.

The TwinCat coupler module "EL1100" has a faulty output port, but when I gently pull on the ethernet plug, I'm able to reestablish the communication again. For the moment this is ok, but the module needs to be replaced as soon as possible.

We run some test production, real production and I gave some trining to the first and second shift operators.

I gave the operator manual to Arnaud Darcel, so he will take care that everybody at Brodart will get a copy.

☐ Material required as per attached list!

☒ work completed

☐ additional visit necessary
